Giannis Psomas

Data Analyst

Athens, Greece | psomasgiannis2001@gmail.com | +30 695 541 8317 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

PL-300 certified Data Analyst who builds end-to-end analyses in SQL Server, Python and Power BI. Analysed 1M+ retail transactions and built a churn model that flagged £3.30M of revenue at risk. Experienced in data validation and in handling confidential records. Speaks three languages: English (C2), German (B2) and French (B2).

SKILLS

Data and BI: T-SQL, SQL Server, Power BI (DAX, Power Query), Microsoft Excel (XLOOKUP, pivot tables, formulas)

Python: Pandas, Scikit-learn, Matplotlib, Seaborn

Methods: Data cleaning, data validation, data modelling (star schema), cohort analysis, RFM segmentation, logistic regression, dashboard design, KPI reporting

Tools: Git / GitHub

PROJECT EXPERIENCE

End-To-End Retail Retention Analysis | SQL Server, Python, Power BI

GitHub | Report (PDF) | Project brief (PDF) | Video walkthrough

- **Data modelling:** Built a Kimball star schema in SQL Server from 1M+ transactions, removing 11,812 duplicates and reconciling revenue to £19.64M before any analysis began.
- **Revenue concentration:** Segmented customers with RFM and K-Means (k=4): repeat customers (72%) generate 97% of revenue and 42 customers account for 27%, showing that revenue depends on a small group worth protecting.
- **Retention:** Conducted cohort analysis in T-SQL (CTEs, window functions, a stored procedure): retention peaks at about 22% in month 2, making the first two months the key window to keep new customers.
- **Churn and Power BI:** Built a logistic regression churn score (ROC-AUC 0.77): 51% of customers are inactive for 90+ days, holding £3.30M of revenue. Delivered it in a Power BI report (21 DAX measures) with win-back recommendations that rank whom to re-engage first.

Fintech Customer Acquisition and Profitability Analysis (In Progress) | SQL Server, Excel, Power BI

- Compares 5 acquisition channels on customer acquisition cost (CAC), lifetime value (LTV), payback, return on ad spend (ROAS), attribution and credit risk (synthetic 10-table dataset, 136K rows) to recommend a budget reallocation, via SQL views, an Excel Solver optimizer and a 4-page Power BI report.

WORK EXPERIENCE

Data Entry Operator | Operators Data Entry Solutions | March 2026 - Present

- Maintain high-volume records on national platforms (Ktimatologio, e-EFKA, myAADE), ensuring data integrity, consistency and audit-readiness.
- Validate data and correct duplicate, inconsistent and incomplete records, handling confidential data under data protection policies.

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300), 2026 (view here)
- Harvard CS50x, 2024 (view here)
- English C2 (Michigan MET)
- German B2 (Goethe-Zertifikat)
- French B2 (DELF)

EDUCATION

BSc in Tourism Management | University of West Attica | Oct 2019 - Dec 2023

Very Good (7.48/10)

University projects: Film Tourism in Greece (survey analysis) | Entersoft A.E. (financial analysis)

MILITARY SERVICE (COMPLETED)

Hellenic Army, Special Forces | Sept 2024 - May 2025
