Giannis Psomas

Junior Data Analyst

Athens, Greece | psomasgiannis2001@gmail.com | +30 695 541 8317 | LinkedIn | GitHub

SUMMARY

Junior data analyst, PL-300 certified, with a data quality background and hands-on SQL Server, Python, Excel and Power BI. Built two end-to-end analyses: customer retention on 1M+ retail transactions (£3.30M of revenue at risk) and customer acquisition (which channels still earn money after credit losses). English C2, German and French B2.

SKILLS

Data and BI: T-SQL, SQL Server, Power BI (DAX, Power Query), Microsoft Excel (XLOOKUP, pivot tables, formulas, Solver)

Python: Pandas, Scikit-learn, SciPy, Matplotlib, Seaborn | **Tools:** Git / GitHub

Data work: Data cleaning and validation, data quality and reconciliation, data modelling (star schema), KPI reporting

Analysis: Cohort analysis, CAC and LTV analysis, marketing attribution, credit risk analysis, logistic regression, statistical testing (bootstrap), forecasting, customer lifetime value, budget optimization

PROJECT EXPERIENCE

End-To-End Retail Retention Analysis | SQL Server, Python, Power BI

GitHub | Report (PDF) | Case study | Video walkthrough

Business question: which customers are lapsing, how much revenue is at risk, and who should be re-engaged first?

- **One trusted revenue figure:** built a Kimball star schema in SQL Server from 1M+ transactions, removing 11,812 duplicates and reconciling revenue to £19.64M.
- **Who drives revenue:** repeat customers (72%) generate 97% of it and 42 customers hold 27%; retention peaks at about 22% in month 2. Found with RFM and K-Means segments and T-SQL cohort analysis.
- **£3.30M of revenue at risk** (51% of customers inactive for 90+ days), ranked with a logistic regression churn score (ROC-AUC 0.77) and delivered in a Power BI report (21 DAX measures) with win-back actions.
- **Checked the findings are not chance** (Mann-Whitney tests, bootstrap intervals) and built a churn model that ranks future churners on a later period (ROC-AUC 0.79 to 0.80).
- **Predicted next-year spend** with a lifetime value model (hold-out error -1.7%) and built a six-month revenue forecast.

FinTech Customer Acquisition and Profitability Analysis | SQL Server, Excel (Solver), Power BI

GitHub | Report (PDF) | Case study | Video walkthrough

Business question: which acquisition channels are profitable after credit risk, and how should the budget shift?

- **One set of trusted metrics:** cleaned a synthetic 10-table dataset (136K rows) in T-SQL, removing 100 duplicate customers, and built 10 reporting views for CAC, LTV, payback and default rate.
- **Paid social is credited about 20% too many customers** when credit is split across all clicks (attribution): its CAC goes from 66 to 82. One campaign costs 365 EUR per customer against a channel median of 62.
- **Affiliate has the best 12-month value (252 EUR) but 24% of its loans default,** mostly because of the loans it brings (logistic regression, ROC-AUC 0.73). Bootstrap intervals show only affiliate is clearly worst after credit losses.
- **Recommended halving three channels and raising referral 20%** (about 40,700 EUR modelled quarterly uplift): Excel Solver model tested in 8 scenarios, and a 6-page Power BI report with a KPI scorecard (56 DAX measures).

WORK EXPERIENCE

Data Entry Operator (Data Quality & Validation) | Operators Data Entry Solutions | March 2026 - Present

- Process 500-550 records/day against a 400 minimum (25-37% above target), and up to 50% above on earlier projects.
- Enter data from source records (Ktimatologio, e-EFKA, myAADE) into in-house systems, checking each entry and correcting duplicate, inconsistent and incomplete records, in line with data protection policies (GDPR).
- Work within a multi-level review process (second and third checks), acting promptly on supervisor feedback; contract renewed on successive projects.

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300), 2026 (view here)
- Harvard CS50x, 2024 (view here)
- Languages: English C2 (Michigan MET) | German B2 (Goethe-Zertifikat) | French B2 (DELF)

EDUCATION

BSc in Tourism Business Management | University of West Attica | Oct 2019 - Dec 2023

Very Good (7.48/10)

Relevant coursework: Mathematics of Administrative Science (9/10) | Tourism Market Research (9/10) | Statistics of Businesses and Organisations (7.8/10)

University projects: Film Tourism in Greece (survey cleaning, validation and hypothesis tests, n = 60) | Entersoft A.E. (ratio analysis with source data audited against annual reports)

MILITARY SERVICE (COMPLETED)

Hellenic Army, Special Forces | Sept 2024 - May 2025
