Giannis Psomas

Junior Data Analyst

Athens, Greece | psomasgiannis2001@gmail.com | +30 695 541 8317 | LinkedIn | GitHub

SUMMARY

Junior data analyst, PL-300 certified, with hands-on SQL Server, Python and Power BI experience. Built an end-to-end retention analysis on 1M+ retail transactions that flagged £3.30M of revenue at risk. Currently validating high-volume records on Greek national platforms under data-protection policies. Fluent in English, with B2 certifications in German and French.

SKILLS

Data and BI: T-SQL, SQL Server, Power BI (DAX, Power Query), Microsoft Excel (XLOOKUP, pivot tables, formulas)

Python: Pandas, Scikit-learn, Matplotlib, Seaborn

Methods: Data cleaning and validation, data quality assurance, data reconciliation, data modelling (star schema), cohort analysis, logistic regression, KPI reporting

Tools: Git / GitHub

PROJECT EXPERIENCE

End-To-End Retail Retention Analysis | SQL Server, Python, Power BI

GitHub | Report (PDF) | Project brief (PDF) | Video walkthrough

Business question: which customers are lapsing, how much revenue is at risk, and who should be re-engaged first?

- **Data modelling:** Built a Kimball star schema in SQL Server from 1M+ transactions, removing 11,812 duplicates and reconciling revenue to £19.64M before any analysis began.
- **Customer segmentation and retention:** Segmented customers with RFM and K-Means and ran T-SQL cohort analysis (CTEs, window functions): repeat customers (72%) generate 97% of revenue, 42 customers alone account for 27%, and retention peaks at about 22% in month 2, so retention should focus on them and the first two months.
- **Churn and Power BI:** Built a logistic regression churn score (ROC-AUC 0.77): 51% of customers are inactive for 90+ days, holding £3.30M of revenue. Delivered it in a Power BI report (21 DAX measures) with win-back recommendations that rank whom to re-engage first.

Fintech Customer Acquisition and Profitability Analysis (In Progress) | SQL Server, Excel, Power BI

Business question: which acquisition channels are profitable after credit risk, and how should the budget shift?

- Compares 5 acquisition channels on customer acquisition cost (CAC), lifetime value (LTV), payback, return on ad spend (ROAS), attribution and credit risk (synthetic 10-table dataset, 136K rows) to recommend a budget reallocation, via SQL views, an Excel Solver optimizer and a 4-page Power BI report.

WORK EXPERIENCE

Data Entry Operator | Operators Data Entry Solutions | March 2026 - Present

- Validate and correct duplicate, inconsistent and incomplete records on national platforms (Ktimatologio, e-EFKA, myAADE), keeping high-volume data accurate and audit-ready.
- Maintain data integrity and consistency across records while handling confidential data under data-protection policies.

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300), 2026 (view here)
- Harvard CS50x, 2024 (view here)
- English C2 (Michigan MET)
- German B2 (Goethe-Zertifikat)
- French B2 (DELF)

EDUCATION

BSc in Tourism Business Management | University of West Attica | Oct 2019 - Dec 2023

Very Good (7.48/10)

Relevant coursework: Mathematics of Administrative Science (9/10) | Tourism Market Research (9/10) | Statistics of Businesses and Organisations (7.8/10)

University projects: Film Tourism in Greece (survey cleaning, validation and hypothesis tests, n = 60) | Entersoft A.E. (ratio analysis with source data audited against annual reports)

MILITARY SERVICE (COMPLETED)

Hellenic Army, Special Forces | Sept 2024 - May 2025
