Giannis Psomas

Junior Data Analyst

Athens, Greece | psomasgiannis2001@gmail.com | +30 695 541 8317 | LinkedIn | GitHub

SUMMARY

Junior data analyst, PL-300 certified, with a data quality background and hands-on SQL Server, Python, Excel and Power BI. Built two end-to-end analyses: customer retention on 1M+ retail transactions (£3.30M of revenue at risk) and customer acquisition (which channels still earn money after credit losses). English C2, German and French B2.

SKILLS

Data and BI: T-SQL, SQL Server, Power BI (DAX, Power Query), Microsoft Excel (XLOOKUP, pivot tables, formulas, Solver)

Python: Pandas, Scikit-learn, Matplotlib, Seaborn

Methods: Data cleaning and validation, data quality assurance, data reconciliation, data modelling (star schema), cohort analysis, logistic regression, marketing attribution, CAC and LTV analysis, credit risk analysis, budget optimization, KPI reporting

Tools: Git / GitHub

PROJECT EXPERIENCE

End-To-End Retail Retention Analysis | SQL Server, Python, Power BI

GitHub | Report (PDF) | Case study | Video walkthrough

Business question: which customers are lapsing, how much revenue is at risk, and who should be re-engaged first?

- Built a Kimball star schema in SQL Server from 1M+ transactions: removed 11,812 duplicates and reconciled revenue to £19.64M.
- Segmented customers with RFM and K-Means and ran T-SQL cohort analysis: repeat customers (72%) generate 97% of revenue, 42 customers hold 27%, and retention peaks at about 22% in month 2.
- Built a logistic regression churn score (ROC-AUC 0.77): 51% of customers are inactive for 90+ days, holding £3.30M. Delivered in a Power BI report (21 DAX measures) with ranked win-back recommendations.

FinTech Customer Acquisition and Profitability Analysis | SQL Server, Excel (Solver), Power BI

GitHub | Report (PDF) | Case study | Video walkthrough

Business question: which acquisition channels are profitable after credit risk, and how should the budget shift?

- Cleaned a synthetic 10-table dataset (136K rows) in T-SQL, removing 100 duplicate customers, and built 10 reporting views for CAC, LTV, payback and default rate.
- Compared 5 channels with position-based attribution: paid social is credited about 20% too many customers (CAC 66 becomes 82), and one campaign costs 365 EUR per customer against a channel median of 62.
- Traced defaults to channel: affiliate has the best 12-month LTV (252 EUR) but 24% of its loans default, so only referral has a positive value after credit losses.
- Built an Excel Solver budget model tested in 8 scenarios (about 40,700 EUR modelled uplift per quarter) and a 6-page Power BI report with 56 DAX measures.

WORK EXPERIENCE

Data Entry Operator (Data Quality & Validation) | Operators Data Entry Solutions | March 2026 - Present

- Process 500-550 records/day against a 400 minimum (25-37% above target), and up to 50% above on earlier projects.
- Enter data from source records (Ktimatologio, e-EFKA, myAADE) into in-house systems, checking each entry and correcting duplicate, inconsistent and incomplete records, in line with data protection policies (GDPR).
- Work within a multi-level review process (second and third checks), acting promptly on supervisor feedback; contract renewed on successive projects.

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300), 2026 (view here)
- Harvard CS50x, 2024 (view here)
- Languages: English C2 (Michigan MET) | German B2 (Goethe-Zertifikat) | French B2 (DELF)

EDUCATION

BSc in Tourism Business Management | University of West Attica | Oct 2019 - Dec 2023

Very Good (7.48/10)

Relevant coursework: Mathematics of Administrative Science (9/10) | Tourism Market Research (9/10) | Statistics of Businesses and Organisations (7.8/10)

University projects: Film Tourism in Greece (survey cleaning, validation and hypothesis tests, n = 60) | Entersoft A.E. (ratio analysis with source data audited against annual reports)

MILITARY SERVICE (COMPLETED)

Hellenic Army, Special Forces | Sept 2024 - May 2025
